

Task 76: Climbing Stairs

PROBLEM DESCRIPTION

You are climbing a staircase. It takes n steps to reach the top. Each time you can either climb 1 or 2 steps. In how many distinct ways can you climb to the top?

JAVA SOLUTION

```
class Solution {
    public int climbStairs(int n) {
        if (n <= 2) {
            return n;
        }
        int prev1 = 1;
        int prev2 = 2;
        for (int i = 3; i <= n; i++) {
            int current = prev1 + prev2;
            prev1 = prev2;
            prev2 = current;
        }
        return prev2;
    }
}
```
