

Task 78: Min Cost Climbing Stairs

PROBLEM DESCRIPTION

You are given an integer array `cost` where `cost[i]` is the cost of the *i*-th step on a staircase. Once you pay the cost, you can either climb one or two steps. You can either start from the step with index 0, or the step with index 1. Return the minimum cost to reach the top of the floor.

JAVA SOLUTION

```
class Solution {
    public int minCostClimbingStairs(int[] cost) {
        int n = cost.length;
        int prev1 = cost[0];
        int prev2 = cost[1];

        for (int i = 2; i < n; i++) {
            int current = cost[i] + Math.min(prev1, prev2);
            prev1 = prev2;
            prev2 = current;
        }

        return Math.min(prev1, prev2);
    }
}
```
