

Task 80: Ones and Zeroes

PROBLEM DESCRIPTION

You are given an array of binary strings `strs` and two integers `m` and `n`. Return the size of the largest subset of `strs` such that there are at most `m` 0's and `n` 1's in the subset.

JAVA SOLUTION

```
class Solution {
    public int findMaxForm(String[] strs, int m, int n) {
        int[][] dp = new int[m + 1][n + 1];

        for (String s : strs) {
            int zeros = 0, ones = 0;
            for (char c : s.toCharArray()) {
                if (c == '0') zeros++;
                else ones++;
            }

            for (int i = m; i >= zeros; i--) {
                for (int j = n; j >= ones; j--) {
                    dp[i][j] = Math.max(dp[i][j], dp[i - zeros][j - ones]
+ 1);
                }
            }
        }

        return dp[m][n];
    }
}
```
