

Task 82: Minimum Number of Arrows to Burst Balloons

PROBLEM DESCRIPTION

There are some spherical balloons taped onto a flat wall that represents the XY-plane. The balloons are represented as a 2D integer array `points` where `points[i] = [xstart, xend]`. Arrows can be shot up directly vertically from different points along the x-axis. A balloon with `xstart` and `xend` is burst by an arrow shot at `x` if `xstart <= x <= xend`. Given the array `points`, return the minimum number of arrows that must be shot to burst all balloons.

JAVA SOLUTION

```
import java.util.Arrays;

class Solution {
    public int findMinArrowShots(int[][] points) {
        if (points.length == 0) return 0;

        Arrays.sort(points, (a, b) -> Integer.compare(a[1], b[1]));

        int arrows = 1;
        int end = points[0][1];

        for (int i = 1; i < points.length; i++) {
            if (points[i][0] > end) {
                arrows++;
                end = points[i][1];
            }
        }

        return arrows;
    }
}
```
